PROFESSIONAL SUMMARY

Motivated Python Developer and BCA graduate with hands-on experience building data-driven applications, automation scripts, and REST APIs. Proficient in Python, SQL, Flask, and data analysis libraries (Pandas, NumPy, Matplotlib). Also holds practical exposure to SAP ABAP development through structured internship training. Strong foundation in OOP, Data Structures, and Database Management. Quick learner eager to contribute as a fresher Python Developer in a collaborative team environment.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript, HTML5, CSS3, C, SAP ABAP

Python Libraries & Frameworks: Pandas, NumPy, Flask, Matplotlib, Click, Requests

Database: MySQL, SQLite

Core Concepts: OOP, Data Structures & Algorithms, REST APIs, File I/O, Automation, Data Analysis

SAP ABAP: Classical Reports, ALV Grids, SmartForms, BDC (Session Method), Data Dictionary, Module Pool

Development Tools: Git, VS Code, PyCharm, SAP GUI, SQL Developer

EXPERIENCE

SAP ABAP Intern (Training) — Migaro Technology Pvt. Ltd

June 2025 – December 2025

- Developed Classical and ALV Reports using SE38 in a live SAP environment as part of structured training assignments.
- Created and managed Data Dictionary objects including Tables, Views, Data Elements, and Domains using SE11.
- Wrote BDC Session Method programs to practice bulk vendor master data upload and reduce manual entry effort.
- Wrote optimised SQL SELECT queries on relational tables (EKKO, EKPO, LFA1) — directly translatable to Python/SQL workflows.
- Practiced structured debugging and code documentation using ABAP debugging tools.

TECHNICAL PROJECTS

Binance Futures Testnet Trading Bot | Python, REST API, Click

Personal Project | 2025 | github.com/KrishSingh2005/binance-trading-bot

- Built a CLI-based trading bot for Binance Futures Testnet (USDT-M) supporting Market and Limit orders with BUY/SELL functionality.
- Integrated Binance REST API directly using HMAC-SHA256 signature authentication for secure order placement.
- Implemented structured logging to file, input validation, and exception handling for API errors and network failures.
- Designed clean modular architecture separating CLI, API client, order logic, and validation layers.

Car Sales Data Analysis | Python, Pandas, Matplotlib

Personal Project | 2025 | github.com/KrishSingh2005/Car-Sales-Analysis

- Analyzed a large car sales dataset using Python to extract actionable business insights on brand-wise performance and pricing trends.
- Used Pandas for data cleaning, aggregation, and filtering — computed total sales, top-performing brands (BMW, Audi), and car-type breakdowns.
- Built Matplotlib visualizations to illustrate the relationship between odometer readings and selling price, identifying clear depreciation patterns.
- Handled real-world CSV data (car_prices.csv, sales.csv) and applied data wrangling techniques to prepare clean datasets for analysis.

Random Password Generator | Python

Personal Project | 2025 | github.com/KrishSingh2005/Random-Password-Generator

- Built a Python script that generates cryptographically strong random passwords based on user-defined length and character set preferences.
- Implemented customizable options including uppercase, lowercase, digits, and special characters using Python's secrets and string modules.
- Added input validation and user-friendly prompts to ensure robust, error-free password generation in a command-line interface.

Vendor Management System | SAP ABAP, BDC, ALV

SAP ABAP Internship Project | 2024

- Developed a vendor data management solution using BDC Session Method for bulk vendor creation and updates in the SAP training environment.
- Implemented ALV Grid reports with sorting and filtering features to display and manage vendor master data efficiently.
- Added validation checks and error-handling logic to prevent duplicate or incorrect vendor entries, improving data quality.

EDUCATION

Bachelor of Computer Application (BCA)

J.C. Bose University of Science and Technology, YMCA, Haryana | August 2022 – June 2025

- Relevant Coursework: Data Structures, Algorithms, Database Management, OOP, Web Development.
- Academic Projects: Developed multiple Python-based applications and web solutions using modern frameworks.

CERTIFICATIONS

SAP ABAP S/4 HANA — CodeOut Training Institute (June 2024 – December 2024)

- Completed 50+ hours of hands-on training on reports, SmartForms, BDC, and Module Pool programming.
- Gained understanding of SAP ERP and S/4 HANA architecture, ERP data modelling, and structured ABAP programming.

KEY STRENGTHS

- Strong Python foundation with 50+ hours of hands-on practice in scripting, automation, and data analysis.
- Solid understanding of OOP principles with ability to write clean, well-commented, maintainable code.
- Practical data analysis skills using Pandas and Matplotlib on real-world datasets.
- Practical SAP ABAP exposure — able to build reports, forms, and data processing programs.
- Analytical mindset with a structured approach to debugging and problem-solving.
- Quick learner — able to grasp new libraries, frameworks, and technologies rapidly.
